

# project pomodoro

## Mission:

- Build a pomodoro-todo web app

## Instructions:

- Learn about the [Pomodoro Technique](#)
- Design, build, and deploy a web app that enables users to:
  - View a list personal To-Do items
  - Create, Update, and Delete To-Do items
  - View # of pomodoros associated with each To-Do item
  - Start a Pomodoro (25 minute timer) for a To-Do item
  - Alert user when the Pomodoro is over
- Send an email to [john@pymetrics.com](mailto:john@pymetrics.com) with your deliverable

## Deliverables:

1. URL of deployed pomodoro-todo app
2. URL of git repository showcasing the code you wrote for the app
3. Overview Document outlining the full stack, and choices/tradeoffs you considered and made.

## Evaluation:

- Meets specifications
- Code quality
- Rationale behind decisions / tradeoffs
- Style / Aesthetics are a bonus, but not as important

## Timeline:

- 7 days
